Program description:

Interdisciplinary dentistry is the most effective means by which to deliver the highest level of service to our patients. Whether addressing specific cosmetic concerns, or providing advanced restorations and rehabilitation, coordinated efforts "improve" and maximize treatment outcomes. The faculty will focus on diagnosis, treatment planning and execution of therapy, both from the unique perspective of the restorative dentist, the periodontist and the surgeon, and from the higher level of understanding attained through their synergistic interactions.

Friday April 1, 2011

- **SESSION I** : *State-of-the-art trends in implantology and hard/soft tissue management*
